DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4, 6-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Gemma et al (US 4,605,452).

Gemma et al disclose orienting the single crystal in a configuration to provide a better fatigue resistance, similar to the orientation described in applicant's specification, pertaining to the tuning of the natural frequency. Although Gemma et al do not explicitly disclose the tuning of the "natural frequency", it is inherent that every time when Gemma et al arrange the crystal seed to a different orientation, at any angle, the natural frequency has been tuned to a different value. Gemma et al discloses the manufacturing of a turbine blade comprising the steps of investment casting the turbine blade with a single crystal having controlled secondary crystallographic orientation (abstract). The single crystal is placed in a desired orientation to provide a better fatigue resistance (col. 3, lines 10-50). *The orientation of the seed is between zero and twenty degrees (col. 3, lines 39-41, col. 12, lines 52-65).* The secondary orientation would not affect the turbine blade's weight, the turbine blade's shape, or the flexure mode of the turbine blade.
